2 Installation

3 Goodbye

Sidebar Options

- The original sidebar is taken from the powerpoint version
- With orange section highlights it looks well ugly
- A version without the orange bar is available.

Tweakier Tweaks

- The section headings can be magically turned orange (edit beamercolortheme.sty)
- Some other stuff can be done.

Package Options

- Applying package options is fun
- Studies have shown that just typing [and] increases your lifespan.
- Options run to:
  - hideothersubsections — hides, er, some subsections.
  - hideallsubsections — hides subsections in the sidebar
  - useorangestripe — uses the original orange bg image

Installation

1. Install Prerequisites
   - TeX + Beamer
   - a computer
2. Copy the `color`, `theme` and `outer` folders into your beamer directory
3. Copy images to /usr/share/infolab21beamer/images/ OR keep them in the current dir.
4. Run `texhash` as root to rebuild the theme cache.

Farewell!

- I regret that the time we had together was so short.
