- 3 Goodbye

Sidebar Options

- The original sidebar is taken from the powerpoint version
- With orange section highlights it looks well ugly
- A version without the orange bar is available.

Tweaker Tweaks

- The section headings can be magically turned orange (edit `beamercolortheme.sty`)
- Some other stuff can be done.

Package Options

- Applying package options is fun
- Studies have shown that just typing [and] increases your lifespan.
- Options run to:
 - hideothersubsections — hides, er, some subsections.
 - hideallsubsections — hides subsections in the sidebar
 - useorangestripe — uses the original orange bg image

Installation

1 Install Prerequisites

- TeX + Beamer
- a computer

2 Copy the color, theme and outer folders into your beamer directory

3 Copy images to `/usr/share/infolab21beamer/images/` OR keep them in the current dir.

4 Run `texhash` as root to rebuild the theme cache.

Farewell!

Goodbye

- I regret that the time we had together was so short.
